

Sprint Report 1 - 30 Days - Team 1- 7/5/2020

Actions to stop doing: We currently don't have any problems with our group and have found our tasks/meetings to be productive. We are satisfied with the leadership as well as our own roles and responsibilities.

Actions to start doing: The team needs to document their code more. It is too difficult, especially with javascript, to understand what people are doing. We also need to collaborate more in order to implement our product better and have it finished on time. We also need to improve our time estimation and allocate our resources to parts of the project we find necessary. It will also be helpful to have smaller, more casual meetings, as we feel they are more productive.

Actions to keep doing: The team is really productive and meeting a lot. We need to keep doing this to keep everybody on the same track.

Work completed/not completed:

Work completed:

User Story 1: "As a new user, I want to know how to add a challenge". The main page of the application now already has the looking of what it should look like and the navigation between pages is working properly as well.

User Story 2: "As a user, I want to gain better habits by viewing new challenges and choosing". The basic challenge page is completed but we have not made our react-native interact with firebase and we are working on it. This is part of sprint 2 though so we can finish it later.

Work completion rate:

(This section should report the following: total number of user stories completed during the prior sprint. Total number of estimated ideal work hours completed during the prior sprint. Total number of days during the prior sprint. For the previous sprint, the user stories/day and ideal work hours/day figures should be reported. For sprints past the first sprint, this section should also provide the average user stories/day and average ideal work hours/day figures computed across all sprints to date. The final sprint burnup chart for the previous sprint should be available for viewing in the lab and an email of this chart sent to the TA/prof)

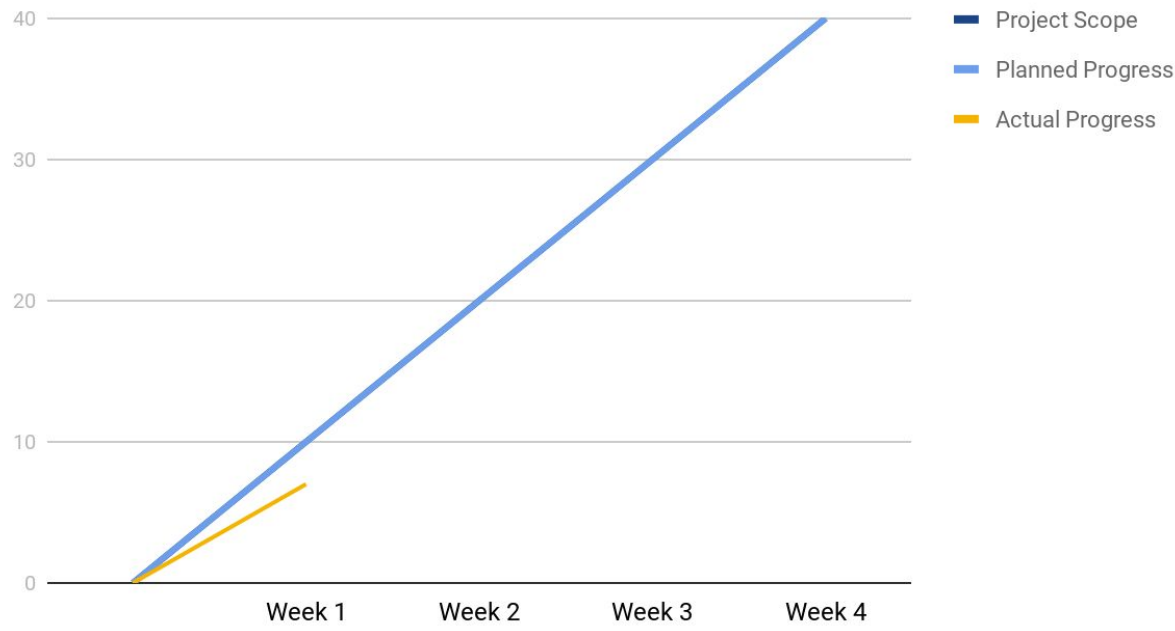

User stories completed: 1/2

Total number of ideal estimated hours: 2.5hrs (User Story 1) + 4hrs (User Story 2) = 6.5hrs per person

Total number of days in the past sprint: 7

Ideal work hours: 30-40 hours

Points scored

User Story 1: 4 points
User Story 2: 6 points
